Contents show] History Origins In the early 1980s, the most prominent CAD systems in the marketplace were CAD/CAM systems, which are sometimes called CAE (Computer Aided Engineering) systems. A computer-aided design system is any of a variety of computer systems and software applications that are used for aiding in the design, engineering, and manufacturing processes. CAD systems generally are used to create solid models of buildings, machines, and other structures. CAD applications may allow for data exchange between CAD systems via network or file systems and the Internet. Software that can be used with CAD systems are called CAD/CAM applications. The German computer scientist Rudolf Bayer, and the French engineer Roland Troncy, independently invented computer aided drafting (CAD) in the early 1960s. Both of their CAD systems were based on graphic tablet technology. In 1966, they founded Micrografx to develop and market the first commercially available CAD system, PRELOADED. In 1970, a UK firm, Programmed Products, offered a CAD system that, in a sense, would serve as a precursor to the CAD systems of the 1990s. In the late 1970s, Albrecht Tietz AG, a manufacturer of CAD/CAM, bought the exclusive rights to PRELOADED's technology and transferred those rights to Tietz software. Tietz began making a CAD system for the German market called PRELOADED II. Also in the 1970s, a new CAD system was introduced by a company called Computer Design Associates (CDA). The system was called ALLER, and like other CAD systems of the time, it was one of the

first to use a graphics tablet and computer mouse. In 1982, Richard "Dick" Becton released a program he called QuickCAD, the first widely-used Windows-based CAD system. It used Windows 3.0 (1982), and ran on a machine with a 486 processor. It was immediately popular in the United States, and CTH Associates, later a major software publisher, acquired the rights to

AutoCAD Inventor was introduced with AutoCAD 2009 for the mechanical and product design industry. Visual LISP was introduced with AutoCAD 2007. It is an open source programming language that is similar to Visual Basic for Applications (VBA). AutoCAD Viewer, the successor of Visio Viewer, was introduced with AutoCAD 2011. AutoCAD 2012 was introduced with the "A-Revo" interface. It uses the Visio-style ribbon. AutoCAD 2013 was introduced with the "BIM" interface. AutoCAD 2015 was introduced with the "BIM" interface. The main interface is similar to the AutoCAD 2013 interface, but it has the use of a ribbon instead of a cross-toolbar. In AutoCAD 2017, the ribbon interface has been improved with several features. One of the most important features is the visual breaking of commands between the ribbon and the cross-toolbar, this allows for easier
